**DETAILED ACTION**

1. Claims 17-20 are pending and being acted upon.
2. Applicant's request for reconsideration, filed 6/26/02, is acknowledged.
3. The following is a quotation of the first paragraph of 35 U.S.C. § 112:  
The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
4. Claims 17-20 stand rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, the specification provides insufficient evidence that after contacting mesenchymal stem cells (MSCs) *in vitro* with an antigen, the MSCs of the claimed method would process said antigen into an antigen fragment for presentation by said MSCs, for the reasons of record as set forth in Paper No. 17, mailed 2/28/02.

Applicant's arguments, filed 6/26/02, have been fully considered but they are not persuasive. Applicant argues that the single example disclosed in the specification in which pulsed MSCs cause a decrease in T cell proliferation is sufficient to support the claims. "The above results would indicate to one skilled in the art that MSCs can be pulsed with an antigen, and that such pulsed MSCs can present such antigen or a fragment thereof to T-cells in order to induce tolerance to such antigen. Thus, Applicants have shown that MSCs could process and present antigens or fragments thereof to T-cells as required by the claims." It remains the Examiner's position that the highly unexpected limitations of the claims ( T cell inhibition through antigen processing and presentation) have not been adequately enabled as they have not been addressed. While T cell hyporesponsiveness with a single antigen has been shown, the mechanism by which the hyporesponsiveness is established (antigen processing and presentation), as recited in the claims, has not been demonstrated. Given the prior art teachings, e.g., Janeway et al. (of record), that MSCs would not likely be capable of antigen processing and presentation, the limitations recited in

the instant claims must be considered highly unpredictable and requiring of more than mere assertion as to the mechanism by which the T cell hyporesponsiveness occurs to be enabled.

5. No claim is allowed.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
